Jakarta Composite Index

JCI successfully rebounded 0.92% to the 5,695.12 level in Wednesday's trading (01/07/2026), ending a three-day losing streak. Even so, the appreciation has not been able to change the primary trend because the index is still moving within a downtrend channel pattern and remains below the EMA10 (5,877), EMA20 (5,998), and EMA50 (6,423), which indicates that the short to medium-term trend is still in a bearish phase with relatively dominant selling pressure. From a technical perspective, if it does not return above the 5,737 level, JCI remains vulnerable to testing support at 5,607, followed by psychological support at 5,594 – 5,523. Meanwhile, if the rebound momentum continues, JCI has the opportunity to test resistance at 5,811, followed by 5,830, and then the 5,876 – 5,900 area. A breakout above that area supported by an increase in transaction volume will be an early signal that selling pressure is beginning to ease and opens up opportunities for a trend change toward a stronger consolidation or recovery phase.

ADVISE: Wait & see; Buy on support.
